Q1: Answer The following:

1) If a check box is not selected, what value is contained in its Checked property?
2) How do you specify the default radio button?
3) Radio button and check box controls have a CheckedChanged event that is invoked when a change is made to their Checked property. True or False?
4) A form contains six radio buttons. Three of the radio buttons are contained in a group box. How many of the radio buttons in the interface can be selected at the same time?
5) Using the While keyword, write a Do clause that processes the loop body as long as the value in the intAge variable is greater than 21.
6) Rewrite the Do clause from Question 1 using the Until keyword.
7) Using the While keyword, write a Do clause that processes the loop body as long as the value in the dblScore variable is greater than 0 and, at the same time, less than or equal to 100.
8) Using the Until keyword, write a Do clause that stops the loop when the value in the strContinue variable contains the letter N (in either uppercase or lowercase).

With my best wishes
Prof. Gamal M. Behery
