

## OVERVIEW

Climate change is becoming one of the most pressing issues that impact almost every creature on the planet. Direct and indirect impacts on food and water supplies and health quality have made climate change a major concern that needs immediate and intensive attention worldwide.

Egypt recognizes the sensitivity and importance of climate change and is keen to seek an active role in collaborating with the global community to confront the various consequences of climate change. This active participation is evident by hosting of the 27th session of the Conference of the Parties (COP 27) to the UNFCCC in Sharm El-Sheikh in the period from 7-18 November 2022.

One important active action to deal with climate change and its impacts, is to develop the awareness of the public on the various issues of this matter, and stimulate and discover talents in how to deal with this important issue. This Hackathon is an important step to mobilize the community to use tools and approaches to develop innovative solutions to tackle some of the consequences of climate change.

## Hack for Climate Change: Innovate for Sustainability

وزارة التعليم العالي والبحث العلمي  
MINISTRY OF HIGHER EDUCATION
